Why charter schools and private schools and homeschooling are not solutions for the failures of the American educational system?

There is speculation that charter schools, homeschooling, and private schools do not address the deficits in government funding and the other failures of the American education system. Most education specialists' articulate that charter schools, homeschooling, and private schools operate under less burdensome regulations compared to public schools. The schools inadequately serve the education needs of students with issues of inadequacy due to lack of accountability, corruption, and a high tolerance for poor performance. Conclusively, education in such schools is associated with issues such as poor socialization, alienation from the mainstream, narrow interests, and isolation (Colander & Hunt, 2017).

Why is school dropout such an important problem?

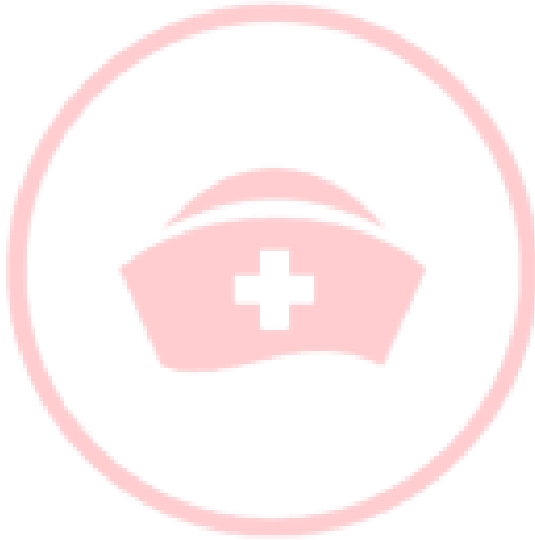

School dropout is an important problem for the entire society attributed to the notion that education plays a critical role in shaping morals, empowering students, and reducing crime rates. Colander and Hunt (2017) posit that a high dropout rate may lead to increased crime rates. Besides, school dropouts have low chances of getting employed, thus increasing the unemployment rate affecting the dropouts' economic status and mental health.

What can be done to reduce school dropout?

Several strategies can be considered to reduce school dropout. Firstly, schools, parents, and the community may establish counseling programs to advise school dropouts. Given the stringent conditions of education, students may be provided with incentives persuading them to attend a school such as work-study plans and flexible school schedules (Colander & Hunt, 2017). In essence, addressing school dropout requires collaborative action among education stakeholders and the entire society.
